

Name **cwHierarchyOnObjectPage** **Version**
Updated by Mathias PFAUWADEL 1.0

Patch Notes

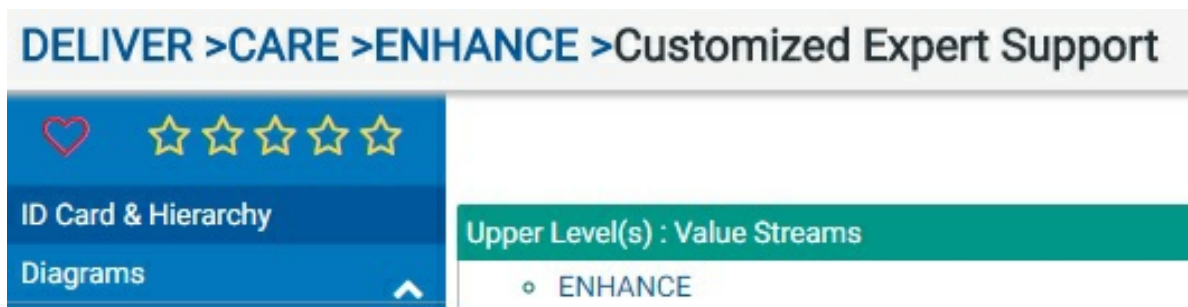

- 1.0 : 1st version working

Description

Allow you to display hierarchy in an objectPage. This is a specific not a layout.

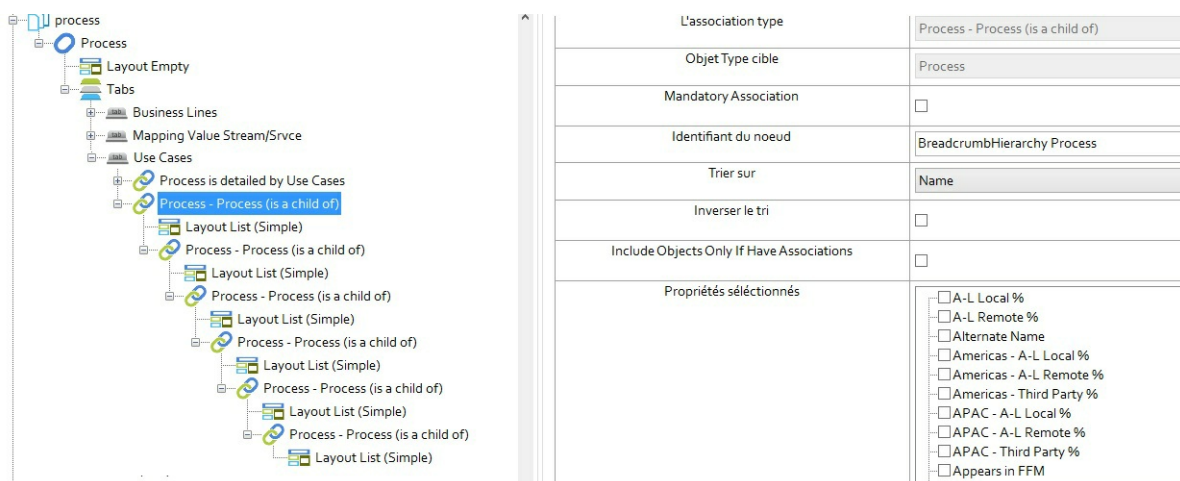

Screen Shot

Here we have a hierarchy of process related with the association type (is child of/is parent of). With the specific we can display the hierarchy in the title of the process

Setup

Node in Evolve

This node configuration need to be done for EACH view where you want to display the hierarchy. For good naming convention, you should use BreadcrumbHierarchy {nameOfTheView}. The hierarchy will apply as long as the node id start with BreadcrumbHierarchy . Remember the node id need to be unique.

Custom Display String	{name} >
-----------------------	----------

Use the custom Display string to put separator between the different element of the hierarchy

On the js code

You need to add the following line with the view you want to use the hierarchy.

Add the line to this file :

\\Evolve\\Site\\bin\\webDesigner\\custom\\Marketplace\\libs\\cwHierarchyOnObjectPage\\src\\hierarchyOnObjectPage.js

```

/*****
Configs : add all the objectPage that will use the hierarchy
*****/
cwAPI.customLibs.breadcrumbConfiguration = ['microprocessus','process']; // list the view where the hierarchy should be use

```

Ps : this line can also be add in your main.js, if you have multiple deployments

Multiple elements

If an element has multiple parent, the specific will display the number of parents
